

MZ An application to facilitate the construction and validation of the MWE dictionary would be developed as an aid to research. Proposed functionalities of the application:

1. data persisted in relational data base
2. web based system
3. rule based validation system
4. creation on new rules
5. new set of rules for English language
6. used existing Polish rule set
7. in process of creation of new mwe user is prompts which rules are valid to ease process of selection correct group
8. shows frequency for expression in connected corporas eg. kgr7 (bigrams, trigrams ,++), other English corpora.
9. search for hyponyms to detect composition
10. option to connect Polish mwe with English mwe equivalent.
11. export data to existing xml format as Polish or English subset.
